

Towards Sustainable Transport Systems

National sustainable development, climate & energy goals

e.g. reduction of poverty, transport emissions, foreign energy dependency

National transport policy

e.g. strategies, guidelines, funding programmes

Supporting institutions and legal framework

e.g. regulatory frameworks, institutional capacities on national, regional and local levels

Transportation taxation and charging policies

e.g. sources of financing

Contraproductive financing policies

e.g. cheap loans for private vehicles, low fuel and vehicle taxation, fuel subsidies, lack of road user charges

Appropriate spending

e.g. based on standardised evaluation criteria and priorities defined in sustainable urban mobility plans
